Summary:

Regarded as the next renewal of the internet, the metaverse has become a hot favorite topic in the tech world. Epic Games has made \$1 billion for metaverse strategies. Goldman Sachs predicts the market size of metaverse might increase up to \$12 million in the future. Conclusion:As technology grows further, developers will be coming up with more advanced devices to offer a far better Meta experience to users, however, a smartphone or a PC is enough to use metaverse platforms such as Decentraland and Roblox. People can use some metaverse platforms such as Decentraland and Roblox. Grayscale estimates that annual revenue from metaverse will reach \$1 trillion in the coming years.

Summary:

Since Mark Zuckerberg announced in a video about Facebook being rebranded as ?Meta?, the term ?Metaverse? has become the subject of discussion, leaving many confused as to what it actually means. Does metaverse matter? Of course, it does but not in the continuous, connected form that could be in the future. How will metaverse change the future? The company called the metaverse the new era of the internet and the next chapter for the company. The company has invested around \$10 billion in the metaverse.

Summary:

Reality is no longer limited to what you see in front of you. We now have alternative realities, including virtual and augmented. 2016 hit mobile phone app, ?Pokemon Go? is a prime example of augmented reality. Virtual reality has been used for immersive journalism in cases such as in Guantanamo Bay, where a journalist virtually entered the prison to obtain real audio and visuals to obtain a story. Display technology allows for an immersive, virtual experience compared to traditional user interfaces. : Advances in virtual reality have been able to act as a powerful tool for communicating design intent with architects.

Summary:

While this has gotten the entire world excited, we are still caught between the age-old fight between centralization and decentralization. With blockchain technology came the promise of democracy, inclusivity and decentralization. DAO Metaplayer will contribute to the Decentralized Meta Sandbox Project ? MetaPlayerOne to decentralize Metaverse as much as possible. They are the big centralized corporations. The interest in decentralized metaverses is justified and venture capitalists have poured in over \$30 billion in the development of these projects in 2021. That brings us to the decentralized world.

Summary:

The following is a guest post from Tri Pham, cofounder of KardiaChain and founder of Whydah.

Metaverse is a virtual world where users can seamlessly connect, interact, and transfer themselves and their products, services, and belongings across multiple digital locations. Blockchain

is already playing a crucial role in developing a digital economy. In the next couple of decades,

I expect many people to engage with the metaverse each day. Blockchain technology and crypto

further help with the uniqueness of collectibles, digital proof of ownership in the metaverse,

compatibility between different spaces, and users controlling the rules of engaging with

the Metaverse via governance. It will generally be gaming that acts as the initial gateway

to the metaverse.

Summary:

The internet, both Web1 and Web2, changed our lives in profound ways. Instead of seeing the Internet on a screen, we can put on our virtual reality headset and we can experience an alternative digital universe that's immersive and makes us feel like we're inside the Internet, rather than outside looking in. Decentraland's MANA and The Sandbox's SAND were among the top 10 best-performing cryptocurrencies in 2021, according to CoinMarketCap er, reflecting growing consumer demand to get in early on the metaverse. But, rather than just viewing the metaverse as the future of crypto, we also need to look at crypto as a fundamental building block of the metaverse. Cryptocurrencies are vital in facilitating transactions in the metaverse. In metaverses, people will play games, build things, socialize, work, and even trade and earn crypto assets.

apple: [40]

programming: [460]

Summary:

Did you miss a session from GamesBeat Summit 2022? Kim noted that he was pro blockchain technology, but he does not necessarily support every implementation of blockchain so far. If I just if I have an interface where my users can sell and buy stuff, and they have that license to transfer money, then I don't care what I'm connecting to the MySQL database, the PHP script, or the blockchain. So I think what will eventually happen, and I think what needs to happen to try and separate some of this is game companies should not go out and say we're going to do blockchain and NFT.?He added, ?You should launch a game, you should let people play a game, and then say, ?Alright, now we're going to have this functionality that's going to allow you to buy and sell items with each other. That's kind of where I'm at.?Radoff said we didn't get to a total agreement or solution in the talk, but he found it helpful to hear the spirited debate.

stocks: [20]

german: [60]

crypto: [1500]

metaverse: [5998]

android: [36]

apple: [30]

programming: [270]

Summary:

Metaverse is the word of the moment ? referring to online, persistent virtual environments that many, including the likes of Facebook and Microsoft ? believe represent the next evolution of the internet. The course covers the technical infrastructure elements of the metaverse, including blockchain, NFTs, and cryptocurrencies and how to invest in them, as well as virtual and augmented reality, and how to buy and sell land in the metaverse. This means that there are increasing opportunities for skilled metaverse engineers, architects, visionaries, and marketers. It covers blockchain, the Ethereum platform and smart contracts, culminating with a project in which you will be guided through the process of building your own decentralized app (dApp). It also teaches the basics of 3D graphic design and leads on to developing your own game or project within the VR environment. In fact, Unity is the most popular engine overall for developers involved in creating VR environments.

android: [50]

apple: [15]

programming: [130]

Summary:

Whether it's Meta, a MetaMask or the metaverse, here's an explanation for many of the most commonly-used web3 terms. Each new piece of information is also assigned a timestamp, which makes it easy for users to find out exactly when it was linked to the database. Because they're built upon the blockchain, transactions made via smart contracts can be closely monitored ? but can't be tampered with after the fact ? by the parties involved. The name comes from the fact that a blockchain stores data in ?blocks,? individual units that are linked, or ?chained, ? together. The Ethereum platform also gave rise to smart contracts ? a subject we'll dive into another week. Ethereum is a decentralized blockchain network built by Vitalik Buterin in 2015.

Summary:

When it's your job to maintain peace in the club, head-butting is a pretty good reason to boot a guest and ban them for life. The trolls and the disruptive people think that they're new. All the Educators in VR moderators I spoke to, who work on a volunteer basis except at corporate-sponsored gatherings, had horror stories about dealing with troublemakers. For instance, new users will often pat strangers on the head, an interaction that would be strange and a little invasive in real life. Virtual spaces have been grappling with how, and whether, to police their inhabitants' behavior for nearly two decades at this point. AdvertisementAdvertisementVanF thinks that companies like Meta need to think through these questions and put more substantial guardrails in place as they try to lure more and more users to the metaverse.

Summary:

In the past year or two, the tech world has been abuzz with two concepts: NFTs and the Metaverse.

Imagine players put on a VR headset, enter a 3D world in which they battle it out with other players, and both pay to play and earn as they win. Where did the container full of valuable goods land before it got lost? The key difference is that it will all be traceable and verifiable on the global ledger: Bitcoin SV. Check out CoinGeek?s Bitcoin for Beginners section, the ultimate resource guide to learn more about Bitcoin?as originally envisioned by Satoshi Nakamoto?and blockchain. Like many new concepts in the tech world, the Metaverse can be challenging to pin down and define.

metaverse: [3588]

android: [123]

apple: [630]

programming: [100]

Summary:

I feel better than last week, so I'm back to business with the usual newsletter. This reminds us once more that we should not forget Google when we talk about the race for AR domination: Meta and Apple are the most important participants for now, but Google is going forward with its ?Project Iris? with very strategic acquisitions, like the one of North, and now of Raxium.

According to the same report, Cambria should be priced at \$800, but Meta has immediately dismissed this claim saying that the headset will be significantly more expensive. This all looks very intriguing, but it's still a research project; Researchers at Carnegie University have developed ControllerPose, a system to detect the full body of the user by just having a fisheye camera installed on every VR controller. This doesn't seem to me distributing wealth in a new way, it seems more like faking it while giving money always to the same people. Launching so many devices (smartwatches, VR glasses, AR glasses) in so small time may be confusing for users, so I'm not so sure that this will be the actual strategy by Meta.

stocks: [5]

german: [10]

crypto: [3570]

metaverse: [1530]

android: [2]

apple: [15]

programming: [210]

Summary:

If ERC-20 was the Ethereum token standard that launched a thousand ICOs, ERC-721 launched a thousand non-fungible tokens (NFTs). Fungible means interchangeable and replaceable; Bitcoin is fungible because any Bitcoin can replace any other Bitcoin. A token is simply a smart contract or a piece of code on Ethereum. An ERC-721 token is created by writing a piece of code in a smart contract programming language like Solidity that follows the same basic template or base code. The most exciting prospect will be seeing how ERC-721 tokens can be used in smart contracts to create completely new business models and ways to transact.

german: [40]

crypto: [860]

metaverse: [3198]

android: [10]

apple: [5]

Summary:

Real estate is hyperactive everywhere, including the metaverse real estate market that has topped US\$500 million. DeFi mortgages also provide an additional level of flexibility ? if you're young and haven't had time to build your credit score, there should be an option for you by way of on-chain data and crypto holdings. Few metaverse-aware people realize that some digital private islands have the same price tag as a physical single-family home or that digital land value is rising by 400-500% in certain cases. Just like in the real world, the value of the digital property depends on its size and location ? including proximity to desirable landmarks such as parks, plazas and business centers ? as well as how highly trafficked the area is or is anticipated to be. They work remotely, play games online, and invest in crypto. Gen Zers are interested in exploring novel business models, especially when those systems prioritize ethics, access and autonomy.

Summary:

Market Scope:The global blockchain in smart homes market is garnering significant traction.

Safe IoT and network environment are important for these smart homes composed of embedded computers, various IoT and connected devices based on the Internet. Most industry players are working to enhance smart home security and patent blockchain usage for secure smart home management. Also, companies around the world are expected to continue exploring the domain, finding new applications, and uncovering new business cases to boost security. These solutions will reportedly store configuration info and changelogs in a permanent, immutable blockchain database. Regional Analysis North America is the biggest market for blockchain in smart homes.

Summary:

Huge buys have been reported across cryptocurrency exchanges for the XRP (XRP), Decentraland (MANA), and FIREPIN (FRPN) tokens, indicating high investor interest. Demand for NFTs and Metaverse integrated dApps (decentralized apps) has seen an increase. A treasure hunt has been started inside the Decentraland Metaverse by the Youhodler platform, a fintech startup.

FIREPIN has effectively established itself among people who will continue to follow the project due to its pledge to finance NFT game creation, 3D and Metaverse VR games, teams, and organizations with a long-term Play-to-Earn (P2E) strategy. The information above does not constitute investment advice by CryptoMode or its team, nor does it reflect the views of the website or its staff.

apple: [15]

Summary:

The metaverse, or the very idea of it, is leaving a bad taste in some people's mouths ? literally (i.e., the ?pixel-flavored? Coca Cola Byte) and figuratively. Yoshida, however, said he doesn't see Final Fantasy XIV as a metaverse because he doesn't associate the concept with entertainment.

?What's so interesting about the systems of our real world?? is how I feel.?Several gaming companies have been investing in the all-encompassing virtual reality for the last several months, including his employer, Square Enix. Those comments stem from the fact that PC gamers have been able to create their own avatars and play and communicate with their friends in games like Phantasy Star Online and World of Warcraft for over 20 years, therefore they've been living in the metaverse before it became a buzzword. ?In the metaverse I'm thinking of, people will be able to use an avatar in real life, and take a stroll in Shinjuku or do shopping, just like in real life. In a recent interview with Weekly Bunshun (translated by Siliconera),

Yoshida spoke about the comments he and his team received from fans comparing Final Fantasy XIV to the metaverse.

weed: [2]

stocks: [190]

crypto: [2520]

metaverse: [678]

android: [3]

apple: [55]

programming: [20]

Summary:

The DEX mainly lacks usability and liquidity compared to the CEX and has not lived up to the hype. The centralized exchange is also not as flexible as it does not make use of smart contracts.

The use cases for the DEX are clear. Most of the world's largest exchanges (such as Coinbase and Binance) operate under a centralized trading model. So the DEX can help new projects get listed and is also a great way for ambitious tech-focused entrepreneurs to invest. The entire premise of blockchain is that no personally identifying information is tied to wallets and NFTs, a fact many overlook when discussing the new ecosystem.

crypto: [2470]

metaverse: [446]

apple: [35]

programming: [20]

Summary:

TerraUSD (UST), the algorithmic stablecoin project backed by Terraform Labs PTE Ltd., lost its U.S. dollar peg for the second time in two days, undermining trust in the pioneering blockchain network's ability to build purely algorithmic stablecoins for e-commerce. Dubbed 'Alipay on the blockchain,' Terra seeks to offer programmable money that's easy to spend, with low fees, instant settlements and utility for cross-border transactions. However, selling such large quantities of Bitcoin into the market all at once may also have contributed to the cryptocurrency's price downturn, Daniel Anethan added. The project's founder, Do Kwon, tweeted that the move should be seen as increasing the liquidity around the UST peg. With Terra using LUNA as collateral to keep the UST pegged to the greenback, the token's market capitalization fell below that of the stablecoin, undermining the credibility of the project. The peg was likely breached because of the large quantities of UST withdrawn from liquidity pools on decentralized exchange Curve, according to media reports.

stocks: [40]

crypto: [470]

metaverse: [2468]

android: [54]

apple: [5]

programming: [60]

Summary:

Buzzwords are aplenty these days. To Snap, augmented reality, a concept it has largely championed over the years, is not only its main driver but its own metaverse to Facebook's Meta. The company's first-ever foray into AR support wouldn't be met until the Spectacles' fourth generation, and while the tech-fueled sunglasses aren't exactly the most foolproof - or even, for that matter, up for sale to the general public - they still act as proving ground for the company in an era wherein Web3 and metaverse real estate reign supreme. Snap's CEO isn't the only one to be hypercritical of the metaverse, evidenced best by the inventor of the PlayStation, Ken Kutaragi, who explained to Bloomberg "the metaverse is about making quasi-real in the virtual world." Summary:

a16z | Liz Harkavy, Eddy Lazzarin, Arianna Simpson | May 10, 2022 There has been a lot of buzz about the metaverse since its coinage in the 90s, but especially during the pandemic (given the surge in online activity), and even more so after Facebook changed its name to Meta. In many ways, the metaverse is just another name for evolving the internet: to be more social, immersive, and far more economically sophisticated than what exists today. Join Canada's Fintech & Funding Community today FREE! There are, broadly speaking, two competing visions for how to bring this about: One is decentralized, generous with property rights and new frontiers, interoperable, open, and owned by the communities that build and maintain it. Property rights rely on decentralization ? they must endure despite the influence of powerful adversaries. We argue that these are necessary to meet the minimum requirement to be called a metaverse.

Summary:

British creative transformation firm WPP and Epic Games, a leading software firm for interactive content, announced a partnership last week to help the former's client brands build digital experiences for the Metaverse. To facilitate this, WPP and Epic Games will collaborate to develop experiences on the latter's popular Unreal Engine, following a successful partnership with Epic Games subsidiary SuperAwesome, leading to the development of a virtual Island for Adidas' Ozweego trainers, developed in Fortnite. Comments and Developments on the MetaverseNilufar Fowler, Executive Vice President of Strategic Partnerships for WPP, said in a statement, "We think of WPP as the creative transformation company, one that embraces new environments like the metaverse and sees the potential for clients. The Unreal Engine-powered game will boost real-time 3D (RT3D) content creation and production for metaverse experiences as a training curriculum complete with tailored instruction for creatives, executives, and the media, the company explained. Numerous firms across the XR industry, including DREST, Snap, Portsmouth University, Taqtile, and STYLY have created programmes to upskill workers and creatives in immersive tech and expand production capacity for immersive content across the sector. Following Facebook's rebranding as Meta in October last year, multinational tech firms have aimed to compete in the global virtual space race with new tools and programmes, production studios, and tech solutions aimed at shaping the next generation of immersive technologies.

Summary:

Introduced in earnest back in 2015 together with the launch of the Ethereum blockchain, smart contracts have often been hailed by enthusiasts as the decentralised future of deal-making.

At the end of the day, it appears like the main issues with implementing smart contracts in Europe have much less to do with regulation than with the technology itself and the way it fits with established business practices. "Anything that cannot be put in a smart contract would be in the accompanying natural-language contract," Dora said. We sat down with Dora Kadar, Nordic Assignee at KassaiLaw, to take a look at this question from the perspective of European law and business practices. "Parties also need to think about whether putting any part of the contract into a smart contract fits their needs for that particular transaction.

To overcome this issue, the concept of a blockchain oracle has been introduced to describe systems or networks that reach out to off-chain sources for information.

Summary:

The biggest news in non-fungible tokens (NFTs) this week is that Instagram is launching a pilot allowing NFT owners to display ? and hopefully help them sell ? their digital collectables.

Digital-Only Work Sells For Close To \$70 Million Sued in the Metaverse On the NFT commerce front, one of the big crypto insanity moments came last year when artist Mason Rothschild sold an NFT Birkin bag for more than the famously expensive purse goes for. Rothschild said he was commenting on the ?cruelty inherent in Hermès? manufacture of its ultra-expensive leather handbags? and asked a federal judge in New York to toss the case, which some believe could set trademark precedent for NFTs and the metaverse. Its report noted that the ?floor? sales prices for what it called an ?entry-level? BAYC NFT is down more than 55% in 10 days, and many other high-profile projects like CryptoPunks and Moonbirds are down at least 20%. Madonna Takes Beeple NSFW Madonna has announced an NFT collaboration with Mike ?Beeple? Winkelmann, the digital artist whose ?Everydays: The First 5,000 Days? collage NFT sold for \$69 million, helping launch the crypto tokens into the mainstream. Called ?Mother of Creation,? the first NFT features a virtual version of the famous ? and famously controversial ? singer giving birth.

Summary:

This copy is for your personal, non-commercial use only. But it will also feature the very first work in my new series, Unfamiliar People, which I started working on after the onset of pandemic but before I became aware of metaverse; it grapples with people's rapidly changing feelings. The creators and artists in the world of [Web3] metaverse, NFT, blockchain don't seem to regard historical art education as important. I awoke to metaverse in the summer of 2020, the first year of the pandemic, when I saw how my children interacted with Animal Crossing: New Horizons. The title of the show at the Broad takes its name from the artist's 82-foot-long 2014 painting In the Land of the Dead, Stepping on the Tail of a Rainbow. Interest in the exhibition prompted Gagosian to offer works from the show to collectors last week, and 127 were sold within 24 hours.

Summary:

Crowdclass are the third of ten founding teams forming the Launchpool Web3 Techstars Accelerator Class of 2022 that we've got on the show over the next few months. All of this is designed to drive engagement and incentivize positive behaviors in students. The second element is an open app ecosystem to give tools for instructors to build what we call 'web3-powered courses', which are courses featuring gamification, learn-to-earn rewards, community learning and peer-to-peer learning. At some point in all of this, I met up with Mario and Bruno again and laid the foundation for getting started on our own project. This is something that we think the metaverse is uniquely positioned to do, and I think there's a level of composability and we will also introduce. Many we've spoken with are interested in helping to finance education for others, but they prefer to do it in a transparent way.

stocks: [5]

crypto: [1730]

metaverse: [332]

apple: [20]

programming: [100]

Summary:

BSV developer and thought leader Joshua Henslee recently shared his thoughts on why the Bitcoin protocol and it being set in stone matters more than anything else. Recalling the words of BSV Blockchain Association Founding President Jimmy Nguyen, he points out that "you can't build on shifting sands." Henslee has spoken before about the chronic short-termism in the blockchain and digital currency industry. It begins with one change and leads to many others down the line, as we have seen on BTC Core, BCH, and Ethereum over the years. He remembers how frustrating it was to ask multiple parties for permission before he could build anything and how this stifled innovation. He contrasts this with Bitcoin Core's top-down approach of simply telling developers they changed something and expecting them to adapt. How a fixed protocol allows for development to flourish Henslee then mentions that BSV has multiple token protocols.

Summary:

UPDATED 22:21 EDT / MAY 09 2022

by Duncan

Riley The price of bitcoin dropped below \$30,000 today, its lowest since July 2021, as investors sold the cryptocurrency amid a broader fall in equity markets. Spooking cryptocurrency investors today has been an issue with TerraUSD, a stablecoin that is described as the backbone of the crypto economy. Similar drops have been seen on international markets that have resulted in some investors turning away from speculative markets ? the investor version of seeking a safe harbor during a storm. However, with bitcoin and other cryptocurrencies, there?s often more at play and this cycle is no different. The flow-on effect was then felt in other cryptocurrencies through the amounts of cryptocurrency being exchanged. After dropping to a low of \$29.892 as of 8:31 p.m. EDT, bitcoin had recovered slightly and was trading at \$30,838 as of 10:12 p.m. EDT.

android: [30]

apple: [20]

Summary:

Katie Contreras and Chris Nguyen, experience experts, stand at the Customer Onboarding station for the Quest Demo space during a preview of the inaugural physical store of Facebook-owner Meta Platforms Inc in Burlingame, California, May 4, 2022. The most important for adoption of the metaverse is the Quest Two virtual reality headset, which consumers can demonstrate to understand the various use cases of virtual reality. Martin Gilliard, Head of Meta Store, tells CNBC that the store is designed to expose consumers to Meta's products, which you really have to experience to understand. Meta is taking the next step in its evolution away from being an ad-supported social network to a hardware-driven tech company for the metaverse age, with the opening of its first-ever retail store. Meta's first brick-and-mortar presence is a tidy 1,500-square-foot space adjacent to its Reality Labs Headquarters in Burlingame, California, with three products on display on blonde wood shelves. CEO Mark Zuckerberg has laid out an ambitious vision for the metaverse, in which people will interact in virtual worlds through various devices such as virtual reality headsets, but has suggested that it won't be done until the end of this decade.

metaverse: [1420]

android: [10]

Summary:

Square Enix recently raised a lot of eyebrows when it sold off most of its Western studios and properties to Embracer Group ? a move that would, apparently, allow the company to invest in "blockchain, AI, and the cloud". The Metaverse itself is usually billed as a kind of online world that mirrors our own ? but that's where Yoshida doesn't quite get the appeal. In an interview with Japanese publication Bunshun (as translated by Siliconera), Yoshida says: "To me, I see the Metaverse as ?a system that replaces reality with a virtual world.? So I don?t think the Metaverse has anything in common with entertainment." He continues: "In the Metaverse I?m thinking of, people will be able to use an avatar in virtual reality, and take a stroll in Shinjuku or do shopping, just like in real life. The Square Enix producer ? often referred to by his nickname, Yoshi-P ? has shared his thoughts on the Metaverse, and it's safe to say that he's not a huge fan right now. The concept of the Metaverse has actually been compared to games like Final Fantasy XIV, the MMORPG that Yoshida and his team have transformed into a colossal success over the last decade or so.

Summary:

The creator of the World Wide Web, Tim Berners-Lee, said he expects virtual reality, and technologies based around a so-called metaverse, to be part of how people interact with his invention in the future. He's also co-founder and chief technology officer of Inrupt, a company developing a decentralized data-storage system called Solid, which he promotes as a successor to Web 2.0. But in a new interview with Bloomberg Quicktake, British computer scientist Tim Berners-Lee also restated his opposition to the world's biggest technology companies being in control of so much of their users' personal data. Also read: 'With VR, we're getting a new media,' he said. The inventor said in the new interview that Solid is 'like a USB drive in the sky, but differentiated from cloud computing platforms by offering a 'pod' of data storage an individual owns and chooses who to give access to. 'I think you'll be able to sit between a movie and a VR world of that movie, for example.

Summary:

Joe Rogan: Bitcoin Is Now a Viable Currency and the Government Is Freaking Out Joe Rogan, the host of The Joe Rogan Experience, likens bitcoin to the early internet. Noting that now the cryptocurrency is "a viable form of currency" that "You can actually buy things with," he said, "the government is freaking out." Joe Rogan, Bitcoin, and the Government Famous podcaster Joe Rogan, the host of The Joe Rogan Experience, talked about bitcoin on his show, posted Tuesday. The popular podcaster believes that there will be a time when the government will introduce a centralized digital currency, similar to what China is doing. Bitcoin.com does not provide investment, tax, legal, or accounting advice. metaverse: [1395]

android: [66]

apple: [55]

programming: [180]

Summary:

(Pocket-lint) - The Quest 2 is a great virtual reality headset for a number of reasons. Virtual reality games on PC require more processing power for better visuals - Half-Life: Alyx, for example, needs a bit of oomph to run nicely. It's a flexible 5-metre cable which means you have plenty of length to get your game on without issue. Visit our PC Gaming hub to get all the latest news and reviews, check out some great features and find details of the best products around. Firstly though you need to be sure that your PC meets the basic requirements for Oculus Link (as it is called) and is VR ready. This gives you back some of the freedom of the wireless headset but it comes at the price of performance.

Summary:

Bitcoin slid through a key support level during the weekend to almost a four-month low, its lowest since January and a decline of more than 25% year to date (YTD). The global crypto market's value today slipped over 3% in the past 24 hours to \$1.65 trillion, according to pricing from CoinGecko. Other digital tokens' performance also declined as Solana, Polkadot, Cardano, Uniswap, Terra, XRP, Avalanche, Polygon, Stellar prices were trading with cuts in the range of 2-5% over the last 24 hours, whereas Tron surged more than 4%. Bitcoin has largely traded in a range of \$35,000 to \$45,000 this year as the crypto market has been impacted by the Russia-Ukraine crisis, rising inflation and fears of Fed rate hikes. stocks: [120]

crypto: [1300]

metaverse: [724]

apple: [90]

programming: [20]

Summary:

Hong Kong is a leading Asian bond hub. As their reach grows, we consider that the SFC and the HKMA must balance protecting investors with facilitating the development of the sector.

It also states that virtual asset-related products regarded as 'complex products' should only be offered to professional investors. Lastly, unlike traditional exchanges, virtual asset exchanges never close and can therefore facilitate more liquidity. However, as Hong Kong increasingly regulates the virtual asset space, the challenge lies in balancing investor protection and assurance with the growth of this sector. Tokenization is particularly well-suited to fixed income products because they have set dates for coupon payments and the repayment of principal amounts.

crypto: [500]

metaverse: [1240]

android: [54]

apple: [30]

programming: [20]

Summary:

Nvidia developers, in association with researchers at Stanford University, have managed to create a pair of VR glasses that use the thinnest VR display system ever made; an invention that could make virtual reality way more accessible. Pancake lenses have allowed this system to shrink in size by reducing the space between components, but VR devices are still a far cry from resembling glasses. For starters, while the optical elements of the headset are some of its bulkiest there are other components too. Typical VR headsets rely on a system of lenses and display panels that have to be housed certain distances apart to create the illusion that we're seeing a 3D world around us. The Nvidia Holographic Glasses use instead rely on ?a pupil-replication waveguide, a spatial light modulator, and a geometric phase lens? to create a true holographic display. While slimmer, Meta's Project Cambria still looks bulky (Image credit: Meta)That being said, don?t expect a wildly different design for upcoming headsets like Project Cambria or even the Meta Quest 3.

Summary:

This month, Spencer Cox, the governor of Utah, signed a bill creating the Blockchain and Digital Innovation Task Force, which will regulate all blockchain initiatives related to the emerging technology in the state and formulate policy recommendations on blockchain. The task force is asked to grow knowledge and expertise about blockchain and devise policy recommendations to promote and adopt blockchain, fintech, and other digital innovations. Twenty new hires will solely focus on the burgeoning threat of crypto crime. "That bill allows for the Department of Finance to contract out with the company that would allow the state and other municipalities and counties and municipalities to accept virtual currency and ensures that any liability for that lies within the person who is paying. The move also comes on the heels of the Securities and Exchange Committee recently beefing up its staff to fight crypto crime and fraud in the newly-announced Crypto Assets and Cyber Unit. First introduced in February, the task force will be comprised of up to 20 members knowledgeable about cryptocurrency, fintech, and blockchain technology.

Summary:

Regardless of whether you're a new or longtime investor, this year has proved challenging.

These are higher margin segments that set this company up to be a long-term winner. Some investors might not feel that way given the growing likelihood of a recession caused by historically high inflation and the Federal Reserve hiking rates. While stock market crashes and steep corrections can be scary, history has also shown they're the perfect time to go shopping. Something else to consider about Meta is the company's leading position in metaverse investments. Because the company doesn't lend, it's not required to set aside capital for loan losses during recessions and economic contractions.

Summary:

People will say all kinds of things about what Bitcoin is: digital gold, the successor to the dollar as a reserve currency, the future of money, whatever. About \$475 million in long Bitcoin positions were liquidated over a 24-hours period, according to data from Coinglass, Bloomberg noted. Unlike regular assets, crypto markets never close. Less-risky assets ? bonds, treasury bills ? look unattractive. The thing about Bitcoin, though, is that it's volatile ? and thus, risky. In that environment, it doesn't make sense to keep money in your savings account ? your savings won't earn enough interest to keep up with inflation.

Summary:

Firm is set to launch its blockchain-native financial services app, WisdomTree Prime, later this year. CEO Jonathan Steinberg said having a mobile financial app will be "table stakes" in 2023. WisdomTree will be the first asset manager to bring passive investing to the blockchain, the company's CEO said, doubling down on past statements about the firm's bullishness on the crypto space. WisdomTree Prime is set to allow users to save, spend and invest in cryptoassets, such as bitcoin and ether, blockchain-enabled funds and tokenized versions of physical assets such as gold. "Nothing can potentially scale faster than a successful mobile app." A glimpse at future products: Will Peck, WisdomTree's head of digital assets, told Blockworks the company intends to launch more products in Europe, as well as enhance existing ones. "So even a 1% allocation to crypto in just the US would yield a \$300 billion market opportunity for crypto exposures, and the realistic opportunity to be multiples of that." Get the day's top crypto news and insights delivered to your inbox every evening. metaverse: [207]

android: [3]

apple: [5]

programming: [10]

Summary:

Bitcoin price is in a fragile state after a breakdown of a critical support barrier. The best possible way to diversify your funds to some of the high return defi protocol such as SAFUU is the highest paying auto-staking & auto-compounding protocol which gives exposure to 383,025.80% fixed APY. Ripple price has also flipped below a stable floor but technicals are still reflecting a bullish possibility. Ethereum, Ripple and many altcoins have already crashed a lot and could continue doing so if BTC does not recover quickly. The remaining 50% of SAFUU in the Auto-LP wallet will be used for the SAFUU side of liquidity, therefore giving equal an 50/50 weighting of SAFUU/BNB which will then be automatically added as new, additional liquidity into the market pair and raising the amount of liquidity in the pool. Every token holder automatically receives 0.02355% interest every 15 minutes just for holding \$SAFUU tokens in their own wallet!

crypto: [1070]

metaverse: [302]

apple: [35]

programming: [50]

Summary:

Glen Weyl, the polymathic Microsoft researcher who came up with quadratic voting, is far more cautious than Owicki about its applicability to blockchain. We've committed in principle to building out decentralized governance, but who knows when that will happen. A major problem is Sybil attacks, in which one person creates a thousand 'sock puppet' accounts and uses them to take over the voting. We're BUIDLers, officially hacking together a Web3 application in the spirit of ETHDenver. Web3 is a realm where coders can feel good again about working in tech. Setting up a DAO is a bit like designing a video game.

--Topic Scores--

general: [7]

stocks: [10]

crypto: [1020]

metaverse: [438]

Summary:

What are crypto staking pools? A staking pool is a tool that allows multiple crypto token holders to pool in their tokens, thereby granting the staking pool operator a validator status and rewarding all stakeholders with tokens for their computational resources? contributions.

Yet, the overall concept of a staking pool is available on blockchains that employ a proof-of-stake (PoS) model and requires stakeholders to lock their crypto tokens in a specific blockchain address or wallet in return for an annual percentage yield (APY). Public stake pools are ideal for retail investors who want to participate in the staking activity without having to stake large amounts of a crypto token which is needed to become a validator on the blockchain network or start a private staking pool. For Ethereum, an investor would need 32 ETH to become an independent validator, so any user can stake Ether (ETH) and earn rewards in the process.

Summary:

In the BFSI sector, blockchain is being effectively used to reduce fraud, execute smart contracts, process payments, and in know-your-customer (KYC) due diligence. The blockchain technology market is fragmented and the vendors are deploying organic and inorganic growth strategies to compete in the market. FinTech is a service provided by companies and is based on software. Accordingly, financial services firms have to build their ICT infrastructure to manage the high-volume transactions of cryptocurrencies such as bitcoin. This will facilitate the blockchain technology market growth in North America over the forecast period. US and Canada are the key markets for blockchain technology in North America.

Summary:

VR has been threatening to be a success for years, but those big and bulky headsets that make your head sweat is one big reason few people are willing to jump in. This means these VR glasses can only display quite limited images and of a lower quality than traditional headsets. But Nvidia's glasses point to a future where sunglasses-like VR goggles could be a virtual reality, erm? reality. Nvidia could just have solved VR's biggest engagement problem with a prototype that resembles a pair of sunglasses. These planned VR glasses are only 2.5 millimetres in thickness. But there's always been that headset design problem, so let's take a look at Nvidia's idea?A VR headset works by magnifying images seen by the user, and it does this by placing good distance between the eyepiece and the display.

UPDATED 11:00 EDT / MAY 09 2022

by Kyt Dotson

The photo and video sharing social media platform Instagram will begin testing nonfungible tokens this week, Meta Platforms Inc. Chief Executive Mark Zuckerberg confirmed today. It will also build on Meta's continuing work to bring NFTs into all of its social media platforms.

Mosseri added that this will be a great opportunity for Meta to make Web3 accessible to a greater number of people. The change on Meta-owned Instagram will allow users to display the digital collectibles as their profile pictures, following a move made by Twitter with its hexagon-shaped NFT profile images. "This week we're starting to test digital collectibles on Instagram so creators and collectors can display their NFTs on their profile," Zuckerberg confirmed in an announcement. 2 DAYS AGO Telus International CEO says tech stock slide is detached from reality BIG DATA - BY PAUL GILLIN .

Summary:

In addition to its signature hot air balloons, the New Jersey Lottery Festival of Ballooning is also getting ready to launch its first-ever line of NFT collectibles. Balloon Festival NFT collectibles will be available as digital art, digital art with an experience and digital art with merchandise, organizers said, which will include art prints, T-shirts, hot air balloon rides and more, depending on the NFT. They can be purchased, sold and traded. A portion of future NFT collections will be airdropped for free to the early buyers of this NFT collection, organizers said. Collectors will be able to buy or resell their NFTs on OpenSea or any other NFT marketplace that supports the polygon blockchain. NFTs, non-fungible tokens, represent one-of-a-kind digital assets.

metaverse: [816]

apple: [60]

programming: [80]

Summary:

Today we're taking yet another look at the Ryzen 7 5800X3D with a big 40 game benchmark, but this time instead of comparing it to Intel's flagship, the Core i9-12900K or even the KS model, we've prepared a shootout against the much more sensible Core i7-12700KF. Last up we have Death Stranding and here the Intel CPUs behave quite oddly, delivering relatively strong 1% low performance with weak average frame rate performance. First and foremost, it's money you can save or spend elsewhere in your new build, and in the fight with the Ryzen 7 5800X3D, AMD claims their high-end gaming solution is at least 40% cheaper when factoring in the cost of the CPU along with the entire platform. All retailers are listing it for \$450, but with no stock you'll have to deal with a 3rd party seller who has tacked on an extra \$50. Dying Light 2 isn't exactly a CPU heavy game and as an action role-playing, survival horror it doesn't exactly require hundreds of frames per second, so 160 fps at 1080p is probably enough and it was certainly enough to match the 5800X3D, though the 1% lows were 8% lower. Halo Infinite does play better on the 12700KF opposed to the 5800X, we're looking at a massive 31% increase in 1% lows at 1080p, allowing the Core i7 processor to roughly match the 5800X3D, so a good result for Intel.

metaverse: [761]

android: [52]

programming: [100]

Summary:

NASA has partnered with Epic Games and HeroX to 'challenge' game developers to create virtual reality assets that help with Mars. NASA has challenged game developers to create virtual reality assets with Unreal Engine 5 that are based on Mars. Developers have the option of using the already supplied assets or adding in their own to create their Mars experiences.

Whether you're a game designer, architect, hobbyist or rocket scientist, anyone can build with UE5, and we can't wait to see the immersive simulations the community comes up with," said Seb Loze, Unreal Engine business director for simulation at Epic Games. Game developers won't be starting completely from scratch as the MarsXR environment already contains a vast "world" that spans hundreds of miles squared, features day/night cycles, realistic martian weather, gravity, spacesuits, vehicles, and other assets. It will be very interesting if some of the environments and experiences created by the developers will provide useful training grounds for future Mars colonists.

crypto: [220]

metaverse: [756]

android: [94]

apple: [430]

programming: [60]

Summary:

For the past six months I've been staring at the backside of my iPhone 13 Pro wondering what possessed Apple to build a Light Detection and Ranging (LIDAR) camera into its flagship smartphone.

In the earliest days of virtual reality, thirty years ago, the biggest barrier to entry was compute capacity necessary to render real-time three-dimensional graphics. Then two British software engineers ? one at Canon Research, another at startup RenderMorphics, both raised on the famed BBC Micro and its outré graphics capabilities ? created tight, highly performant libraries to do real-time 3D rendering in software. Yet it took virtual reality twenty years to catch up to the quantum leap in real-time 3D, because virtual reality is more than just drawing pretty pictures at thirty frames a second. Fortunately, by the mid 2010s, Moore's Law gave us computers a thousand times faster ? more than enough horsepower to track a body, with plenty left over to run a decent VR simulation. Apple needed to do this because the company's much-rumored AR spectacles will necessarily sport several LIDAR cameras, feeding their M1-class SoC with a continuous stream of depth data so that the mixed reality environment managed by the device maps neatly and precisely onto the real world.

Summary:

Augmented reality was used on one of the biggest stages in sports when the Super Bowl LVI halftime show created a 360-degree augmented reality experience for fans to view on their mobile devices. Those technologies enabling virtual production include augmented reality (AR), virtual reality (VR), extended reality (XR) and mixed reality (MR). "We managed to create a virtual space that allowed for a dynamic coverage of the tournament, which seamlessly combined real and virtual imagery in a way that significantly enhanced the story and audience engagement," said Nev Appleton, director and co-founder at MOOV. The new virtual production studio at Garden Studios allows filmmakers to shoot real-time virtual effects on set by using virtual graphics displayed on an LED volume (an enclosed space where motion capture and compositing can take place) to create photo-realistic backdrops. "This exciting new tool allows for features such as digital set extensions, the ability to focus past the LED wall into the digital world, and near time rendering." Copyright NAB Show Daily

Summary:

Intel Vision Intel is ramping up its efforts to take on GPU giant Nvidia in the accelerated computing space with a strategy that focuses on a diverse portfolio of silicon built for different purposes. For instance, Intel's Xeon server CPUs are best suited for data pre-processing, inferencing, and a broad range of applications in the same server, according to Medina, while Intel's GPUs are a better fit for servers that have a high mix of AI, HPC and graphics workloads.

More than two years after acquiring AI chip startup Habana Labs for \$2 billion, Intel's deep learning unit is revealing two new chips, Gaudi2 for training and Greco for inference. In exchange for all that heat, Intel is claiming major performance leaps over Nvidia's A100, which is also made on a 7nm processor but only supports a maximum of 80GB of HBM2e memory.

The x86 giant claims the former can leapfrog Nvidia's two-year-old A100 GPU in performance, at least based on their own benchmarking. The chipmaker said these specs translate into support for more than 30 1080p streams for video transcoding, more than 40 game streams for cloud gaming, up to 62 virtualized functions for virtual desktop infrastructure, and up to 150 tera operations per second for media AI analytics.

apple: [30]

Summary:

Cities: VR is available now, bringing a reworked version of the original PC game, Cities: Skylines, to Quest 2. However, while this new release retains a lot of the original's spirit, the end product leaves a lot to be desired. There is a sandbox mode for each map as well (unlimited money, all elements/services unlocked from the get go), but there's a lot less satisfaction in designing your dream city and watching it come to life when the visuals are so hampered. It does successfully bring most of the core Skylines elements over to VR with some of that 3D novelty intact, and the breadth of customization options available is a real strength. What did you make of our Cities VR review?

crypto: [700]

metaverse: [181]

apple: [20]

programming: [50]

Summary:

Like brakes to a bicycle, fintech must exist within the realms of regulation if it is to ditch its 'wild west' persona. While AI has greatly elevated the middle of the banking funnel, blockchain technology is serving as the underlying technology to fuel speedier and more secure transactions across a global network, whilst reducing costs and maintaining anonymity. Synonymous with industry disruption, open banking quickly became a defining element of the global pandemic.

Many of the activities that create regulatory frameworks to provide guard rails for cryptocurrency address the underlying use of blockchain and distributed ledger technologies, so that aspect appears to be fundamental. With traditional banks giving the green light and go ahead on the integration of online services, AI is being used to assess risks, detect and prevent payments fraud, as well as improve anti-money laundering (AML) and know-your-customer (KYC) regulatory checks. Better insights? With so much competition in the market, it is near impossible to keep track of who has what rates, who is lending to whom and where new markets are being penetrated.

Summary:

North Idaho College natural sciences students have the resources to literally move mountains ? small mountains, ANYWAY. Cyan Fronev of Coeur d'Alene, an NIC Outdoor Recreation Leadership student and soon-to-be spring 2022 graduate, said being able to use the AR sandbox in her geology lab was a unique classroom experience. NIC facilities staff built the actual sandbox structure, and NIC staff from the IT Help Desk helped set up the computer software and calibrate the camera and projector. The AR sandbox was developed in the early 2000s by staff at the University of California-Davis' W.M. ?On the first day we had it out in labs, I answered most questions with ?Let's go see it in the box.? It's been a really engaging tool.?The AR sandbox won't be limited to the college-level labs on NIC's main campus in Coeur d'Alene. UC-Davis made the software available to the public, so setting up an AR sandbox is relatively low-cost and simple to do.

programming: [110]

Summary:

CJ Dawley died by suicide at the age of 17. Now, a group of researchers at Carnegie Mellon University (CMU) are offering a possible solution to the leg tracking problem that has so far arguably limited how immersed people can really feel in virtual spaces. Software filtered out bad pictures and fixed lens distortion, then stitched camera images together so they could be used to estimate the headset wearer's real-life poses. Those estimates determined the poses of the full-body avatar in VR. With the prototype, users could make their avatar kick and stomp blocks in 'Feet Saber' (a tongue-in-cheek reference to the popular VR game 'Beat Saber'), or twist and turn into the right position to pass through an obstacle in a sort of human-sized 'Tetris' game. In an Instagram 'Ask Me Anything' session in February, Meta CTO Andrew Bosworth acknowledged the difficulty of the task while saying the company is considering how to solve it.

Summary:

Bitso, a cryptocurrency platform in Latin America, with over 4 million users, has announced a new way for customers -including Argentina, Brazil and Mexico- to put their crypto to work and earn yields. The World Economic Prospects Report recently raised its inflation forecast for Latin America and the Caribbean to 11.2 per cent for 2022, which implies that the purchasing power of citizens in the region continues to decrease. "I'm more than thrilled to announce this milestone to the market, that will help our customers make crypto even more useful", said Daniel Vogel, CEO & Co-Founder of Bitso. The clients' bitcoin and USD stablecoins balance in Bitso will earn them yields, which will be credited to their accounts each week. "One of our main objectives as a company is to help financial inclusion and financial freedom across the region, and with this product we are making it happen. We are giving our customers an alternative way of gaining yields, and we hope this new product can also help more and more Latin Americans get closer to crypto, understand the benefits and start using it right away," concluded Vogel.

Summary:

Audio player loading? You can turn your Meta Quest 2 (formerly Oculus Quest 2) into ?an almost-native Steam VR headset? that should also improve your VR performance thanks to an open-source tool.

Their tool is called OculusKiller and it effectively ?kills? the Oculus Dash function of the Oculus PC app and auto-launches Steam VR. A Screenshot from Half-Life: ALyx (Image credit: Valve)What?s more, ItsKaitlyn03 found that removing Oculus Dash will save you around ?200 MB of memory + GPU? which it eats up even when it?s not in use. Find the OWService option in the Task Manager program (Image credit: Future)Open up File Explorer, and go to C:\Program Files\Oculus\Support\oculus-dash\dash\bin; an easy way to do this is to copy and paste that string into the Address Bar and then hit Enter on your keyboard. A mushroom world No Man's Sky that you'll be able to explore with OculusKiller's help (Image credit: Hello Games)Now you can slip on your Quest 2 headset and seamlessly slip into great SteamVR games like Half-Life Alyx and No Man?s Sky. The folder you're taken to is the home of key files that allow the Oculus PC app to operate properly, but we're going to need to change some around.

Summary:

Facebook parent company Meta teased its new high-end virtual reality headset, codenamed Project Cambria, on Thursday, showing CEO Mark Zuckerberg himself playing with the next-gen VR display.

In 2023, there will be a new version of Meta's low-end Quest headset, which currently starts at \$299. Zuckerberg plays with and virtually pets that creature, then appears to paint a virtual world over physical walls. Zuckerberg didn't show the headset itself ? it's mosaicked out ? but he did show off a new mixed-reality experience, which appears to involve a virtual pet, called The World Beyond. The ?full-color passthrough version? of The World Beyond will only be available on Meta's upcoming Cambria headset, but a demo version will be available through Meta's App Lab soon, Zuckerberg said. The headset, described in a recent report as ?a laptop for the face? that aims to bring remote work into virtual reality, is reportedly priced at \$799 and higher.

german: [20]

crypto: [620]

metaverse: [11]

apple: [610]

programming: [10]

Summary:

There have been a lot of discussions, and not a few arguments, for and against the need for a U.S. central bank digital currency (CBDC). Just 4.5% of consumers were using mobile wallets of any kind, leaving Apple with just 1.7% of all in-store payments. Earlier that month, a Treasury undersecretary told Congress that a dollar-pegged stablecoin could benefit the U.S. dollar. Of course, there's no similar concern about competition from stablecoins in China as it already banned all cryptocurrencies. However, the Federal Reserve's FedNow real-time payments system is rolling out soon, and The Clearing House's Real Time Payments service is already in place. In the U.S., one of the biggest benefits of the widespread use of stablecoins has been their potential for faster, cheaper, around-the-clock payments.

Summary:

Francis Yoshimoto, assistant professor in the UTSA College of Sciences' Department of Chemistry, is introducing his Biochemistry II laboratory students to a new way of learning-; using virtual reality headsets to observe and analyze protein structures. With the headset on, students could travel inside the protein. It has, for example, been used to aid pharmaceutical businesses in their work designing novel drugs-;a recent advancement for developing new medicines. Yoshimoto's students utilized the Department of Computer Science's VizLab to set up these virtual reality (VR) headsets. The project is representative of UTSA's commitment to programs that provide students with a greater understanding of marketable skills needed in the workplace and are particularly important in linking classroom success to life after graduation for historically underserved populations. The 3D VR headsets proved an effective way to instruct students about protein structures-;immersing them in a unique learning experience.

metaverse: [613]

apple: [10]

programming: [40]

Summary:

Intel Vision The rollout of Intel's Arc discrete GPUs has been slower than expected for folks hungry for a fresh option in the computer graphics hardware market. Intel "launched" its lowest-end mobile GPU, the Intel Arc 3, at the end of March while promising the more powerful Intel Arc 5 and Intel Arc 7 graphics would hit laptops in early summer. Pearce said Intel planned to have broader availability of Intel Arc 3 laptops from PC makers at this point, but the software and lockdown issues had delayed a broader rollout of laptops with the GPUs until this month.

Later in the summer, Intel will, in theory, release the more powerful Intel Arc 5 and Intel Arc 7 graphics cards for PC makers globally. Up until recently, Nvidia and AMD have been struggling to supply the high demand there has been for their discrete GPU products, so it's no wonder that people are so hungry for a third option.

programming: [10]

Summary:

Scientists have invented mouth haptics for VR that allow users to feel different virtual experiences with their mouths. The mouth haptics are programmed to do different things depending on the situation, including single impulses (taps), pulse trains (multiple taps in a row), swipes in the x, y, and z directions (moving along, down, and towards your mouth), and persistent vibration. Facebook's parent company Meta recently announced a new work-focused headset called Project Cambria intended for use in the metaverse while a leaked internal roadmap revealed that a total of four new VR devices are on their way in the next two years. Ryan Dinsdale is an IGN freelancer who occasionally remembers to tweet @thelastdinsdale. The Meta Quest 2 was the only headset tested in the study but the new technology can seemingly be added to any VR device, and plenty more are on their way. LoadingWhen partnered with virtual reality demos, this essentially means that users will feel different sensations on their lips, teeth, and tongue depending on what they're doing in-game.

apple: [5]

Summary:

A small group of US creators will be able to start sharing their NFTs on Instagram this week, following a similar move by Twitter. NFTs, or non-fungible tokens, are digital files with verified identity and ownership. Meta CEO Mark Zuckerberg confirmed the move in an Instagram post yesterday (9 May), along with a video clip of a conversation between himself and Quest Nutrition co-founder Tom Bilyeu about NFTs, Web3 and the metaverse. He also said that Meta is working on a feature that will allow creators to 'place digital art into real places' through augmented reality NFTs on Instagram Stories via Spark AR, its AR studio launched in 2017. This verification is done through blockchain technology, creating a 'smart contract' for owners of the file. NFT profile pictures are distinguished from regular ones by their hexagonal shape, and only Twitter Blue subscribers on iOS devices could use the feature.

Summary:

Oi-Yee Choo, an investment banker who has recently become CEO of Singapore-based fintech ADDX, likens the company's efforts to make private markets accessible to the formation of Asia's Reits industry. The idea is still gestating and it will take some trial and error to land on the best business model. Family offices or single investors, on the other hand, didn't have the long-term liabilities of a pension fund, so they didn't want their assets tied up in funds with 10-year lockups. The platform uses smart contracts and microservices to provide custody-like securities services, such as operating a register, handling payments, minting fiat tokens, and moving assets among client accounts. ADDX and its contemporaries talk about making private assets available to smaller investors, but the real business looks to be the opposite: aggregating the wealth of small investors to create a digital-native capital market across the lifecycle of Asian companies.

--Topic Scores--

general: [7]

crypto: [200]

metaverse: [580]

android: [66]

apple: [15]

programming: [60]

Summary:

Francis Yoshimoto, an assistant professor in the Department of Chemistry at the University of Texas at San Antonio, is teaching his Biochemistry II laboratory students how to use virtual reality headsets to see and study protein structures. Yoshimoto's students were able to apply the knowledge they gained from the classroom in a way that applied to a future profession in biomedical research after being introduced to and trained in VR technology. Students could travel inside the protein by wearing the headset. Students could alter their viewing angles of the protein and traverse forward and backward using the joystick on the Oculus hand controller while using the ProteinVR viewer with the Oculus headset. Putting a virtual reality headset on to go inside an actual protein was truly an eye-opening experience for both myself and my students. Students used typical computer applications to create snapshots of a protein, such as Chimera or Pymol, and then proceeded to the same section of the protein in ProteinVR, a web-based molecular visualization program that allows users to see proteins using a VR headset.

Summary:

It wasn't even a month ago that it was reported Intel was facing delays for the launch of its highly-anticipated Arc desktop GPUs. Plus, Intel is allegedly refusing price guarantees for retailers too. Finally, we wrote previously that earlier delays made it seem like Intel might miss its window of opportunity with Arc. Still, hope springs eternal, and there's still a good chance Intel will come to market with a very competitive product. This is allegedly confirmed by Nvidia cancelling its 16GB version of the 3070 Ti as it was deemed unnecessary. It could even become a new battleground in the GPU turf wars.

Summary:

In Brief Colonial Pipeline is facing an almost \$1 million fine for control room management failures after the US Department of Transportation alleged they contributed to the nation's fuel disruption in the wake of the 2021 ransomware attack. Avast, AVG bugs put "dozens of millions" at riskTwo high-severity flaws in Avast and AVG security products ? Avast acquired AVG in 2016 ? went undiscovered for years, putting "dozens of millions" of users at risk, according to SentinelOne researchers who discovered the bugs. CEO charged in \$62m crypto mining scamThe US Justice Department has filed charges against the CEO of Mining Capital Coin (MCC) for allegedly orchestrating a \$62 million global investment fraud scheme. This group of miscreants, also known as APT29 and Cozy Bear, breached thousands of US government and private-sector networks in 2020 after exploiting SolarWinds' Orion software. Instead of generating returns for his investors, Capuci diverted the funds to his own cryptocurrency wallets. According to the indictment, 44-year-old Luiz Capuci Jr of Florida misled investors about his cryptocurrency mining and investment program.

Summary:

Intel Vision Intel has said it has put "desktop-caliber" silicon in a mobile package to provide its fastest 12th-generation Core laptop processors yet. Intel alleged the Core i9-12900HX is faster than the best laptop silicon from AMD and Apple. The chipmaker unveiled the seven 12th-generation Core HX laptop chips at the Intel Vision event Tuesday, where the company also revealed AI chips meant to challenge Nvidia and a roadmap for its fledgling product line of infrastructure processing units for datacenters. Specific benchmark figures were not provided for the tests it performed, though Intel shared various performance comparisons [PDF] that put its flagship chip above Apple's M1 Max and AMD's Ryzen 9 6000 H-Series chips across multiple tests. The base power for all the latest chips is 55 watts, and it can go up to 157 watts to squeeze every ounce of performance out of the silicon. However, we note that, for instance, the Intel Core i9-12900HX was given an Nvidia RTX 3080ti graphics card in its tests, the previous i9-11980HK an RTX 3080, and the AMD Ryzen 9 6900HX was fobbed off with an RTX 3060.

stocks: [5]

crypto: [520]

metaverse: [165]

android: [2]

programming: [40]

Summary:

LedgerEdge, the blockchain-based trading platform for corporate bonds, is now in production.

Several institutions have issued blockchain-based bonds, including the World Bank, European Investment Bank, and Singapore banks DBS and UOB. The bond trading startup was co-founded by David Rutter, CEO of enterprise blockchain firm R3 who previously founded LiquidityEdge, the US Treasuries platform acquired by MarketAxess. Most trading venues offer centralized order books, where sell-side firms upload all their data and the trading platform then owns and sells that data, including back to the trader. Indian regulator SEBI is using blockchain to track the status of bond issuances such as credit ratings, coupon payments, and assets that back the bond. Don't need a blockchain node A key challenge with many DLT solutions is the need for participants to go through the hurdle of deploying a node on the distributed network.

apple: [10]

Summary:

<https://www.wsj.com/articles/global-stocks-markets-dow-update-05-09-2022-11652073278> U.S. stock futures fell and government bond yields rose to fresh multiyear highs as investors worried additional interest-rate rises and measures to contain Covid-19 in China would weigh on growth. Shares of cryptocurrency companies fell in premarket trading Monday alongside bitcoin. Crypto exchange Coinbase Global shares fell 4.8%, while bitcoin mining company Marathon Digital Holdings shares declined 7.6%. It's the opposite of what we've had for the 18 months prior to this year, which was the ideal backdrop for risk markets. These fears have led some money managers to hold the dollar, seen as a safer investment in times of volatility, due to its status as the world's reserve currency. Fed Chairman Jerome Powell said officials weren't considering an even larger increase at the central bank's next meeting. The reality is that we have been living in an extraordinarily low-rate environment for a long time, and it's natural for the Fed to be raising rates, regardless of the inflation numbers, he added.

Summary:

Decrypt Media has just announced its successful spinout from ConsenSys Mesh, the blockchain accelerator and incubator, after raising US\$10 million in funding on a US\$50 million post-money valuation. The fundraise was joined by Hack.VC, Hashkey Capital, Canvas Ventures, Protocol Labs, SK Group, as well as four DAOs (Global Coin Research DAO, Own.fund, Honey DAO, and Orange DAO) and a number of strategic individuals. In 2021, the publication brought on Dan Roberts (Yahoo Finance, Fortune) as Editor-in-Chief, Jeff John Roberts (Fortune) as Executive Editor, and journalists from ABC News and The Street. It will also invest heavily in PubDAO, the decentralized newswire Decrypt co-launched in October with other partners and advisors that is being used as a way to source stories, press releases, and other crypto work in a truly Web3-native way. It was launched inside the ConsenSys Mesh incubator program with the aim of helping the world understand crypto and Web3 and has since grown to 5 million average monthly unique visitors and 25 full-time employees. Decrypt plans to invest in further editorial growth and live video efforts at Decrypt Media, and will continue to build out Decrypt Studios, which has seen success with branded NFTs and metaverse activations in fashion, entertainment, and real estate for clients.

Summary:

Rapidly developing technologies that fulfill exceptional speed and bandwidth requirements are always on the increase. Enter Nitro Nesting: To this dynamic digital ecosystem, Nitro has added Nesters (people who host the network and validate it) built on a 1:1 grid concept (1 Nester in 1 km location). The rise of Web3 and the rising presence of IoT devices has resulted in the development of a new class of low-cost mining protocols that use low-power network technologies. There are very few companies who have established themselves in the IoT mining field in recent years, with projects such as Helium (HNT) and Nitro Network (NCASH) creating LoRaWAN-based networks that send data in return for the native HNT and NCASH coins. With a bird-eye view of the massive demand in the IOT landscape powered by the emerging market of 5G, Nitro's macro setup with a micro outreach has managed to overpower the current challenges faced by its competitors like Helium. The networks of the future or Private Communication Networks (PCNs) will determine how we will be functioning in a hyperconnected world where people, devices and data work in an orchestrated world driving efficiencies and productivity.

android: [8]

apple: [10]

programming: [50]

Summary:

Horizon Worlds is Meta's social VR platform for Quest 2 and Rift which includes ways for users to explore together, create their own rooms, and play mini-games. The change is slated to take place starting June 6th, the company says in a blog post, which will allow Horizon Worlds users direct access to Venues events, such as live sports, concerts, comedy, and user-created meet-ups. The company says it's still publishing highlights and replays of Venues events in Oculus TV. Horizon Worlds is still in somewhat of a beta, as only 18+ users from the US and Canada have access right now. It might suggest the wider rollout of Horizon Worlds won't feature the sort of fanfare associated with some of its most celebrated platform exclusive features and games although that's pure speculation. Meta says it will roll out Horizon Worlds in more countries at some point this summer.

Summary:

Bottom line: Of the five newly announced creator-focused laptops, Asus has put the most power inside the Zenbook Pro 16X OLED. For thermals, the Zenbook Pro 16X utilizes Asus's new IceCool Pro vapor chamber cooling system that features dual fans with 97 blades each, a 5mm heat pipe for the CPU and GPU, and an Active Aerodynamic System (AAS) Ultra mechanism for heat dissipation. It's also helped by the 4K 16:10 OLED 60Hz touch panel that's Pantone validated, supports 100 percent of the DCI-P3 color space and offers 550 nits of max brightness. Further control over apps is made possible by a rotatory controller next to the haptics-enabled touchpad. Fully specced, its 16.9mm, 2.4kg aluminum chassis can house a 14C/20T Core i9-12900H chip paired with an RTX 3060 GPU (70W), 32GB RAM and 2TB of PCIe 4.0 M.2 storage. The main highlight is the Zenbook Pro 16X OLED (UX7602), Asus' most powerful Zenbook to date.

Summary:

This week, AMD is officially announcing its refreshed family of RDNA2 GPUs. According to AMD, anyone who buys a GPU from a participating retailer will receive a code that can be redeemed once the full details of the promotion are available later this quarter. AMD also briefly gave details on a new promotion its running, dubbed Raise the Game. As far as the best balance between affordability and performance for AMD at the moment, it's probably going to be either the 6700 XT or the 6750 XT. While they aren't dramatically faster than the first models AMD debuted, they offer the same benefits with a bit more clock on top. GPU clocks are nearly identical between the 6x00 and 6x50 models.
