Summary:

With cryptocurrencies such as Bitcoin, Ethereum, Dogecoin or Stellar generating headlines in the last year, it's been difficult not to notice the influence of blockchain-based cryptocurrencies on regular people. Once the transaction proceeds, it cannot be reversed once it has been completed and registered in the blockchain. Blockchain technology allows users to securely share and keep cryptocurrency. Because Bitcoin is still in its early stages and is not governed by regular banking and government systems and regulations, it is prone to greater volatility. It is an asset that derives its value from the native blockchain as opposed to fiat (or cash as it is commonly known) that derives its value from government-issued currency. Many people believe that Nakamoto designed Bitcoin in this manner on purpose in order to establish electronic money that would be inflation-proof.

Summary:

We just witnessed a stunning crypto crash, but now what? Hundreds of people on Mt Gox, a name now synonymous with pain and misery, had their accounts hacked and their Bitcoin stolen. Bitcoin has already survived 7 crypto crashes so far, this is number 8. Elon Musk announced Tesla would start accepting Bitcoin payments for cars. Fear, uncertainty and doubt (FUD) went viral, triggering the price of Bitcoin to crash over 50% by the end of June. At the same time, Ethereum (ETH) had made a name for itself as the second-largest crypto by market cap.

crypto: [ 5355 ]

metaverse: [ 1709 ]

apple: [ 135 ]

programming: [ 70 ]

Summary:

After the launch of Bitcoin in 2009, developers from all over the world started getting interested in cryptocurrency and blockchain technology. This led to the creation of smart contracts, and through them, to the creation of numerous new blockchain products, countless projects, and a new era of unique use cases and experimentation with this technology, whose potential suddenly seemed limitless. Not to mention the proposals that get passed and are expected to make network changes often impact the usage of some other project, which leads to an entire series of other problems. So, more complex projects have to resort to combining multiple basic contracts to achieve the desired functionality for their project. For years, they were trying to make new projects on their own blockchains, sometimes as a fork of Bitcoin's own chain, and sometimes building the new chain from scratch. This, however, severely increases gas prices, due to the fact that it creates more work for the network, and clogs it, so transaction times get slower.

--Topic Scores--

general: [ 27 ]

stocks: [ 10 ]

crypto: [ 4960 ]

metaverse: [ 2562 ]

apple: [ 20 ]

programming: [ 180 ]

Summary:

The Ethereum Metaverse blockchain is a public, open-source platform that allows users to create and operate decentralized applications. The main reason for this increase in gas fees is due to the increased usage of DAPPs and ERC20 tokens. Another reason why there is an increase in Ethereum blockchain gas fees is because of difficult decentralization. These projects take time to complete which affects everyone involved with using ETH as well as developing new technologies. The main function of this protocol is to create new digital identities (Avatars) for people as well as create digital assets such as Cryptokitties or other unique virtual items that can be bought, sold, or traded among users. Many people have got complaints about it because it makes operating with ETH a bit more expensive than before.

programming: [ 100 ]

Summary:

Officials in other countries ? notably U.S. Treasury Secretary Janet Yellen ? were more constructive in their responses, looking to hasten regulation of the rapidly growing sector rather than rubbishing it or trying to kill it off. Binance CEO Changpeng Zhao ? known in the crypto community as ?CZ? ? said Terra's hyperinflation should be handled by a token burn, not a ?fork at an old date.? Terra's UST crash is also drawing regulators' attention. Yet it pays to be mindful that despite the gesture politics in Beijing, and the (understandably) ginger reaction in policy circles elsewhere to last week's debacle and the state of the crypto market more generally, the industry's development continues apace. Yet as Temasek's blockchain investment chief told Forkast, the lack of Bitcoin in its vault doesn't mean it has gone sour on the technology and developments that surround it. Terra co-founder Do Kwon may be aiming for the stars, but his UST stablecoin project is now in the gutter. In 2016, The DAO ? one of the world's first decentralized autonomous organization experiments ? suffered what was characterized as a hack.

--Topic Scores--

general: [ 7 ]

stocks: [ 80 ]

german: [ 20 ]

crypto: [ 3790 ]

metaverse: [ 1043 ]

apple: [ 20 ]

Summary:

A significant change in the way the Ethereum (ETH) blockchain works, as well as whether Calyx Token (CLX) delivers on its revolutionary promises, could have far-reaching implications for cryptocurrency investors. Despite the fact that the Ethereum (ETH) blockchain is home to many of the most exciting crypto innovations (such as the creation of NFTs and smart contracts), Ethereum (ETH) has always come in second to Bitcoin (BTC). Ethereum (ETH) and Calyx Token's (CLX) Long-Term Prospects Ethereum (ETH) will finish The Merge at some point, which will be huge news not only for crypto investors, but also for anyone concerned about the energy consumption of Proof-of-Work blockchains. An NFT purchased on the popular OpenSea marketplace, for example, currently costs between \$35 and \$40 in gas fees. Users will simply need to exchange an equal number of tokens for LP tokens to begin earning a percentage of all swap fees. Furthermore, the long-awaited launch of Calyx Token (CLX), an upcoming liquidity protocol, could result in a major shift in the way exchange platforms are used, as well as filling the pockets of its presale holders.

crypto: [ 3320 ]

metaverse: [ 1215 ]

android: [ 3 ]

apple: [ 5 ]

programming: [ 10 ]

Summary:

Image courtesy Non Fungible Films  
Opinions expressed by Digital Journal contributors are their own. Because of how large the blockchain is, it may also be pointless to pull off a hack anyways.

Not to mention, the blockchain will make it difficult (if not, impossible) to change the data as it is recorded. The purpose of blockchain technology will make things a lot faster and simpler compared to the old fashioned methods. The blockchain itself can be secure because it is always growing to the point where not even the most sophisticated hacker could dare attempt a stunt. This means that people who are using the blockchain can see the transactions that are going on in real time.

Summary:

Amidst the Mounting Risks to Bridge Security, A New Non-custodial Liquidity Bridge Focuses on DecentralizationOriginally posted here. While many believe bridges are the single most significant potential point of failure in crypto, others say that?s not true. This robust penalty slashing mechanism is implemented to incentivize every node to follow the protocol to be rewarded in DTOs by providing proper service to users. The project is primarily building a decentralized oracle and cross-chain liquidity network (bridge) on the Casper Network, the future-proof, proof-of-stake blockchain built off the Casper CBC specification. Transferring Assets SecurelyDotOracle offers fast asset transfer confirmation with a highly secure distributed consensus protocol PBFT. In response to the hack, Axie Infinity co-founder and COO Aleksander Leonard Larsen said at the time that they would be adding several new validators to the Ronin Network to decentralize the network further.

Summary:

RELATED: A beginner's guide to staking cryptocurrencies Bitcoin divides people like no other investment. Bitcoin has yet to prove that it offers the world a killer application it can't get elsewhere and, given that most investors do not really understand how it works, its price moves are still largely driven by sentiment, whether positive or negative. An alarming number have funded this through credit cards and other forms of credit, leaving them with a double whammy of investment loss and debt, made worse by rising interest rates, Interactive Investor said. New York's tech-heavy Nasdaq index is down about 30 per cent this year and the same forces are at play. The collapse of the TerraUSD stablecoin hit sentiment and hastened the flight from digital tokens. So, even when we see periods of relative calm, it does not last long. It is not game over yet.

Summary:

Chainanalysis | May 18, 2022How Storyline reinvents investigations for web3When Chainalysis invented blockchain analysis tools in 2014, very few people understood what was happening on Bitcoin blockchain. Our goal with Chainalysis Storyline is to bring this same simplicity to the more complex multi-chain world of DeFi, and make it easy for our users to comprehend the blockchains of the web3 era. Decentralized and distributed, NCFA is engaged with global stakeholders and helps incubate projects and investment in fintech, alternative finance, crowdfunding, peer-to-peer finance, payments, digital assets and tokens, blockchain, cryptocurrency, regtech, and insurtech sectors. DeFi protocols have made chain hopping easy, allowing users to switch between several different kinds of cryptocurrency in a single transaction. With Storyline, a user constructs a new story by starting with a transaction hash. The easy-to-use interface allows you to focus on the transactions, assets and related wallets that are of most interest.

Summary:

Do Kwon, co-founder and chief executive officer of Terraform Labs, poses in the company's office in Seoul, South Korea, on Thursday, April 14, 2022. Per blockchain data tracking firm IntoTheBlock, the total volume traded on NFTs on Ethereum has recently hovered between \$72 million to \$78 million, down significantly from the high of \$594 million registered on April 30. It remains to be seen how long LUNA is able to hold ground, given the bearish macro picture and lingering uncertainty about Terra's future. A hard fork splits a single blockchain into two, of which the new one shares all of the history of the parent blockchain but is headed off in a new direction. On Tuesday, Chicago Federal Reserve President Charles Evans, one of the Fed's most reliable policy doves, called for faster rate hikes in the coming months while mentioning inflation controls as the bank's top priority. The non-fungible tokens (NFTs) craze, which led to network congestion on Ethereum in the past, has cooled.

crypto: [ 2100 ]

metaverse: [ 286 ]

android: [ 6 ]

apple: [ 5 ]

programming: [ 20 ]

Summary:

The crypto crash will not reduce the sector's climate impact any time soon, an economist has warned, even though the environmental footprint of digital currencies is in theory set by their market value. The higher the value of the reward, the more energy it is worth using to try to win it, ensuring that as the price of bitcoin rose from \$8,000 in October 2019 to \$60,000 two years later, the energy use of the sector rose too, from 73TWh to its current high. That's because the cost of cryptocurrency mining is split over two main areas: buying the hardware, and paying for electricity. Stablecoins are an important part of the cryptocurrency ecosystem. How they achieve that varies: the largest, such as tether and USD Coin, are effectively banks. Show A stablecoin, like the name suggests, is a type of cryptocurrency that is supposed to have a stable value, such as US\$1 per token.

crypto: [ 1950 ]

metaverse: [ 289 ]

programming: [ 30 ]

Summary:

What happenedCryptocurrencies lost ground Wednesday as investors continued to attempt to assess the state of the U.S. economy and what steps the Federal Reserve will need to take to rein in high inflation. But comments from Fed Chairman Jerome Powell Tuesday seem to have spooked investors. The federal funds rate now sits in the range of 0.75% and 1%, and the price of Bitcoin is down nearly 39% this year. The Federal Reserve has boosted its overnight benchmark lending rate, the federal funds rate, several times already as it undertakes a fiscal tightening regimen designed to bring inflation back under control. While that's still unusually high, it was down from March's 8.5% year-over-year increase, suggesting that inflation may be starting to slow. Many other cryptocurrencies have moved away from proof-of-work protocols because they are bad for the environment, but Bitcoin is not expected to -- at least, not anytime soon.

Summary:

The road to hell is paved with good intentions, but that's no comfort to the many people who have lost all their money as a result of the estimated US\$50 billion Terra UST/Luna crash, a crash that took place in just three short days. Terra's collapse has potential longer-term impact on Tether USDT the world's largest stablecoin which has the wider financial markets spooked. You can't mint your way out of bankruptcy all the time, tweeted Binance CEO Changpeng Zhao, also known as CZ, after Terra announced that their blockchain had resumed block production as if there'd just been a technical hitch. And as UST began to show signs of strain in late March, a team in the form of the Luna Foundation Guard (LFG) started to buy Bitcoin, amounting in total to US\$3.5 billion between January and May this year. He needs to give a frank disclosure as to what has happened with the US\$3.5 billion Bitcoin collateral, to show where it is now. He needs to own up to his troubles with the U.S. Securities and Exchange Commission and his involvement in Basis Cash, a previous failed stablecoin project.

Summary:

In this article BTC.CM=By September 2021, China made up just over 22% of the total bitcoin mining market, according to Cambridge University research. Now, new research from the Cambridge Centre for Alternative Finance shows that Chinese bitcoin mining activity has quickly rebounded.

There is one caveat: The research methodology relies on aggregate geolocation from huge bitcoin mining "pools" ? which combine computing resources to more effectively mine new tokens ? to determine where activity is concentrated in different countries. China was once the world's biggest crypto mining hub, accounting for between 65% to 75% of the total "hash rate" ? or processing power ? of the bitcoin network. It means China is once again a top global player in bitcoin mining ? second only to the U.S., which eclipsed China as the largest destination for the sector last year. That process entails making complex calculations to work out a puzzle that increases in difficulty as more and more miners join the network, known as the blockchain.

Summary:

The first indication from El Salvador's extremely online president Nayib Bukele that his country's experiment with Bitcoin was not going well came last week, in typical fashion, on Twitter.

One of those officials sanctioned for corruption, Bukele's chief of staff, was also the director of the parent company of the Chivo wallet. AdvertisementAdvertisementIt has belatedly dawned on some of Bukele's crypto fans that maybe he wasn't kidding about the cool dictator stuff.

AdvertisementAdvertisementAdvertisementAdvertisementThe bubble burst last week, as the stablecoin Terra proved to be far less stable than advertised and crashed, precipitating a wider freefall in crypto markets which wiped out \$400 billion in market capitalization. AdvertisementAdvertisementAdvertisementBitcoin was sold to the Salvadoran public as a cheaper vehicle for remittances and banking for the unbanked, the fact that it never caught on for either purpose was never the main point.

But until that happens, the popularity of cryptocurrencies rests on in their highly volatile values and the get-rich-quick dreams they conjure, which cuts against the very promise of stability and future everyday use.

Summary:

Revealed exclusively to Forbes, the features are part of the company's new offering called Web3 engine, which also includes custody services, treasury management, risk mitigation tools and a tokenization mechanism for managing the whitelisting, minting, burning and transfer of NFTs. The network underpins the troubled stablecoin TerraUSD (UST) and its sister token LUNA, both of which collapsed to nearly \$0 last week. The New York-based startup is serving about 1,200 institutions including exchanges, banks, lending and trading desks and hedge funds helping them move, store and issue cryptocurrencies. According to Shaulov, in less than a month Fireblocks' customers had transferred around \$3 billion in volume across the platform interacting with Terra's popular dapps such as lending protocol Anchor, staking platform Lido and peer-to-peer exchange Astroport. This includes buying NFTs on marketplaces like Coinbase NFT and OpenSea, trading on decentralized exchanges like Uniswap and Sushiswap, and borrowing and lending through DeFi platforms like Curve and Compound. Yesterday, cryptocurrency exchange Coinbase introduced a similar capability for its retail users, enabling them to access Ethereum-based applications directly from the Coinbase app.

german: [ 40 ]

crypto: [ 1540 ]

metaverse: [ 226 ]

apple: [ 25 ]

Summary:

Cambridge Centre for Alternative Finance | May 17, 2022 New mining map data, spanning the period from September 2021 to January 2022, included shows that the US has remained at the forefront of Bitcoin mining and extended its leading position (37.84%) amidst the global hashrate recovery.

Following a sudden uptick in covert mining operations after the June 2021 government-mandated ban on Bitcoin mining, China has re-emerged as a major mining hub (21.11%). Recent research has suggested that the Chinese decision to ban Bitcoin mining has worsened (rather than improved) Bitcoin's environmental footprint. See: When we released the last update of the Cambridge Bitcoin Electricity Consumption Index (CBECI), mining map in October 2021 (covering data up to the end of August 2021), the Bitcoin network was grappling with the consequences of the Chinese ban on domestic mining activities. Canada experienced only a moderate increase in its hashrate from 11.54 EH/s in August 2021 to 12.15 EH/s in January 2022, which resulted in a loss in market share from 9.55% to 6.48% as total network hashrate was growing significantly faster.

One deterring reason could be perceived political risk given the vocal opposition of the Russian central bank to Bitcoin mining, going as far as lobbying for outlawing this activity.

Summary:

The cryptocurrency market's near-\$2 trillion loss in value forces a difficult question: Could crypto trigger a broader economic slowdown? This is all very new. Mati Greenspan, CEO of Quantum Economics, a research and investment firm, said there was a lot at stake in how stablecoins perform in the coming days. ?It would spill over into the real economy if a whole lot of people had been borrowing in order to do that, and it?s not always easy to see that when times are good and prices are up.? It?s a concern that highlights the uncertainty inherent in a market that by many measures is still in its infancy but is now mainstream enough to inspire multiple Super Bowl ads and attention from mainstream financial institutions. Crypto trading is most common among men aged 18 to 29, of whom 43 percent said they had invested in, traded or used a cryptocurrency, according to a Pew Research Center survey in September.

--Topic Scores--

general: [ 11 ]

crypto: [ 1500 ]

metaverse: [ 470 ]

apple: [ 10 ]

Summary:

DeviantArt is expanding its tool for detecting ripped-off crypto art, offering it to artists outside the platform. Users can upload copies of art to Protect and have it matched against non-fungible token (or NFT) images minted to one of several public blockchains. Protect scans images minted to the Ethereum, Klaytn, Polygon, Arbitrum, Optimism, Palm, Tezos, and Flow blockchains, and if a match is detected, artists can choose to send a pre-filled Digital Millennium Copyright Act (DMCA) request asking markets to remove the offending NFT. Unfortunately for artists, there's no simple way to have an image taken off a blockchain, whether the picture is encoded directly into the chain or added as a link that's hosted somewhere else. They're currently suffering from a lot of fraud and abuse and infringement. Marketplaces have taken an increased interest in stolen or copyminted NFTs, a widely acknowledged problem in the space. The new version of Protect will let anyone upload 10 images (totaling up to 2GB) and have them monitored for free, or users can sign up for DeviantArt's \$3.95 monthly Core service and monitor up to 1,000 images totaling 50GB.

Summary:

You may have a rough idea of what an NFT is: a virtual document that conveys some ownership of a virtual good. ?I didn?t buy it with a long-term investment strategy. advertisementadvertisementWith the recent crash of the crypto market, it appears that NFTs were just a bubble gone bust. The NFT investing market is very volatile, with no indications of it settling down. But there are good reasons to invest in NFTs?to support artists, to access coveted virtual or real-world goods and experiences, and to get the satisfaction of buying into a cultural world you love. For instance, Twitter has started allowing NFT owners to officially use their NFT images as profile pictures.

apple: [ 10 ]

programming: [ 40 ]

Summary:

?The crypto market is extremely volatile? ? this is a statement most, if not all, in the fintech sphere have heard. This most recent price spiral downwards appears to have been sparked by the dramatic fall in value of the TerraUSD stablecoin, designed to trade one on one against the dollar-snapping off its peg, whipped by winds of panic rushing through the crypto world.

Crypto needs to shed its volatile image and I am heartened to see that the UK is speeding up its plans to regulate the crypto market in light of this crash. The recent collapse of Terra and Tether and other stablecoins have shown a lack of transparency and an ironic ?instability? in a supposedly more ?stable? cryptocurrency. This has been the worst crash the crypto market has seen since 2020, when Bitcoin hit \$3,850 in March. There will necessarily be trial and error involved in this process with some pitfalls along the way, however, it is a necessary step for crypto to ?grow up? and gain legitimacy and I am committed to using my expertise to work with policymakers in guiding this process.?

Summary:

This copy is for your personal, non-commercial use only. Overall, more than \$1 trillion of crypto market value has vanished in the last six months as tokens from Ether to Dogecoin have plunged. Coinbase claimed to have three million users on its NFT wait list but since launch has yet to see more than 200 NFT transactions on any given day, Cembalest writes. The crypto selloff isn't confined to tokens. The argument that Bitcoin is a store of value keeps disintegrating before our eyes with its eroding price, high correlation to the Nasdaq Composite index, and volatility that remains five times that of the S&P 500, he notes. The falling value of Bitcoin also repudiates the argument that it's a hedge against inflation, which is running at an 8% annualized pace, he notes.

apple: [ 20 ]

programming: [ 30 ]

Summary:

Meta is in the process of introducing non-fungible tokens (NFTs) to the social media channel Instagram, a move that is set to transform how users present themselves online, engage with each other and create an income from social media. Facebook/Meta has tried multiple times to enter this arena, including the ill-fated Diem stablecoin that attracted stiff opposition from regulators and politicians,? comments Adi Ben-Ari, founder and CEO of the blockchain-based solutions provider Applied Blockchain. ?I feel excited to be able to share my NFT journey with the community I've been cultivating on Instagram for over 10 years! It will be interesting to see how this relationship develops, perhaps with more Instagram influencers promoting digital collectibles to their followers. Meta is to collect and organise public data from open blockchains, such as Ethereum, in order to provide this feature, however, it will only be able to identify which collectibles belong to collectors and creators when they connect their third-party wallets to Instagram. ?Instagram?s integration of NFTs represents a major step-change for crypto.

crypto: [ 1010 ]

metaverse: [ 139 ]

apple: [ 20 ]

programming: [ 60 ]

Summary:

Cardano is getting ready to become more scalable network despite relatively low load. According to Cardano Insights Twitter account, the Cardano network will soon present a decreased smart contract transaction size after developers use CIP 31-33 proposals that will go live on Vasil Hard Fork. Average Transaction Sizes (bytes) on epoch level. As developers start to use CIP-31 / CIP-33 (<https://t.co/HCh9Nr3pIj>) this should reduce transaction sizes for smart contract transactions. Despite the active development process in the background, ADA is failing to break through the profitability death spiral as it remains one of the worst-performing assets on the cryptocurrency market in the long term. At press time, ADA trades at \$0.5 and is losing 40% from its value since the beginning of the month following general cryptocurrency market performance. Cryptocurrency enthusiasts should already be familiar with a mechanism similar to Cardano Improvement Proposals, which was presented on the Ethereum network and called "Ethereum Improvement Proposals." CIPs are not presented as commitments to existing projects on the Cardano blockchain and act more like a stack of solutions for commonly mentioned issues within the ecosystem.

android: [ 4 ]

apple: [ 35 ]

programming: [ 260 ]

### Summary:

A flash loan or flash loan is nothing more than a scheduled loan on a DeFi-protocol, capable of offering a provision of funds to users without them needing to provide a guarantee (neither in cryptocurrencies nor of any kind) for the funds that are lent to them. To do this, the attacker requested a flash loan in AAVE and, knowing of a vulnerability in the pool rounding system and a development pool (sUSD), used both flaws to manipulate prices within Alpha Finance and seize \$37,5 million. Our hacker takes the profit from him, AAVE gets his money and commission back, but Balancer and their LPs take a hit to their cash flow. That is, the nodes of the network see the transaction, they can even report the account balance within the origin and destination wallets, even if there is no confirmation. Think that every time a liquidity provider enters tokens into the AAVE protocol, that pool where it participates increases its liquidity (for example, adding ETH/USDT to AAVE). The Defi protocol provides the user with access to some funds so that they can use them and return them to the protocol in the same operation, including the corresponding commissions.

Summary:

China has re-emerged as one of the world's largest Bitcoin producers despite the government's 2021 blanket ban on cryptocurrency mining, according to a new study from the Cambridge Centre for Alternative Finance (CCAF). The CCAF data showed that Kazakhstan, which became a popular destination for fleeing Chinese miners following Beijing's ban, placed third with 13.2% of Bitcoin hashrate share in January, followed by Canada at 6.5%. It noted that some public servants use state resources to mine crypto. In January, China controlled 21.1% of the global Bitcoin hashrate, to become the second-largest Bitcoin producer trailing the 37.8% in the U.S., according to the CCAF. However, China's Bitcoin hashrate surged back to 30.47 exahashes per second in September, right after the ban, suggesting "significant underground mining activity has formed in the country," the CCAF said. In March, the country's anti-graft watchdog warned that authorities are keeping a close eye on possible corruption behind underground crypto mining.

Summary:

A woman using her mobile phone is reflected on an electric board showing exchange rates of various cryptocurrencies at Bithumb cryptocurrencies exchange in Seoul, South Korea, January 11, 2018. "Luna was once a major coin of top-ten market capitalisation, so they will do whatever it takes to revive it," one hopeful investor wrote in a blog on South Korea's internet platform Naver, without saying who "they" could be. Both tokens are affiliated with Terra, a blockchain platform co-founded by Korean developer Do Kwon and, according to blockchain analytics firm Elliptic, investors in them have lost around \$42 billion. The window for speculation is limited as Bithumb and Upbit, two of South Korea's largest exchanges, said they will suspend trading support for Luna on May 27 and May 20, respectively, while another, Coinone, has halted deposits in the crypto-currency ahead of a possible de-listing on May 25. read more There is little the government can do to protect investors as cryptocurrency trading takes place outside its regulatory sphere. Under the system, one TerraUSD token could be swapped for \$1 of Luna, and vice versa, and once swapped the coins would be destroyed.

Summary:

Wormhole ( <https://wormholenetwork.com/> ), the generic cross-chain messaging protocol, announced today it has launched support for Algorand , a pure Proof-of-Stake (PPoS) blockchain with an extremely robust decentralized finance (DeFi) ecosystem. Now, developers can leverage the Wormhole SDK to build decentralized applications (dApps) and protocols that can move value seamlessly across nine major blockchain networks without fees. When tokens or NFTs are bridged through the Portal Bridge, the origin token is locked in a smart contract while a new Portal-wrapped version of that token gets minted on the target chain. The protocol has experienced zero downtime since launch, helping it become the blockchain of choice for thousands of organizations launching DeFi protocols, NFTs, payment solutions, regulated digital assets, and more. ?The network plays a key role in enabling liquidity to flow into new ecosystems, which has a profound impact on the growth and expansion of decentralizing protocols, projects, liquidity, governance, and participation. ?It will allow us to access all the liquidity that exists outside of Algorand, significantly boosting the TVL of the network.?Algorand is a Layer 1, pure Proof-of-Stake blockchain.

Summary:

Another day, another cryptocurrency meltdown. Even the most ardent blockchain boosters will admit that the vast majority of what WIRED recently called the "flashing-neon crypto casino" of memecoins, NFT drops, and DeFi projects will ultimately go poof and take almost everyone's money with it. WIRED: The idea that you're proposing epitomizes one of the central promises of Web3, which is to give people control over their data. She issues tokens on a blockchain that give the bearer access to all her music wherever it lives online. Every platform has an interest for the creator ecosystem to be built on a stable financial base. One much-touted promise of Web3 is that it will let ordinary internet users truly own their data and store it on a blockchain no single entity controls, instead of having it harvested and monetized by giant tech companies.

Summary:

TerraUSD, a so-called "stablecoin," has seen its value drop from \$1 apiece a week ago to about \$0.09 on Monday, demonstrating not all that much stability. This has been described as an attempt to manipulate DeFi token prices for profit, though it might simply reflect recent market volatility or an exodus from Anchor as an oversupply of lenders drove the interest rate down. The protocol ensures the supply and demand of Terra is always balanced, leading to a stable price." All told, the coin collapse has erased about \$42bn from the Terra ecosystem.

Last week, the Luna Foundation Guard (LFG), a fund established by Terra creator Do Kwon, bought \$3.5bn in Bitcoin to prop up its Terra tokens. "We are still debating through various distribution methods, updates to follow soon."

Summary:

Injective, a blockchain optimized for building decentralized finance (DeFi) applications, has passed a major proposal to launch developer-focused incentives in light of the recent Terra downfall. The proposal was created on Injective's governance portal on May 12, after a number of Terra developers began to seek a new chain in order to continue building their projects. Injective is the first fully decentralized blockchain optimized for building dApps focused on exchanges, derivatives, prediction markets, and options. "Our team has been working with an influx of developers who have reached out after Terra's recent incident," said Mirza Uddin, Head of Business Development of Injective Labs. Injective uniquely brings Ethereum compatibility to the Cosmos IBC universe, allowing Terra developers to quickly create applications with familiar tooling, but with much farther reach for users. "It's incredible to see how quickly the Injective community has banded together to show support for its fellow Cosmos IBC universe developers," said Eric Chen, CEO and co-founder of Injective Labs.

Summary:

Daily Email Feature State Street Digital Takes 'First Step on the Moon' Nadine Chakar, head of State Street Digital, said the firm had taken 'the first step on the moon' by successfully completing a pilot of same day settlement using blockchain infrastructure. Lee continued that tokenization creates a new ecosystem and there is a real desire in the industry for competition and change. 'We want to be infrastructure for institutions so we absolutely need to be regulated ourselves,' Lee said. 'Regulatory approvals are required but a true stablecoin, a digital representation of \$1, will allow 24x7 settlement.' Lee said Paxos will apply to the SEC for approval as a clearing agency and a public comment prior will come out over the summer. The regulator said the proposed changes are designed to reduce the credit, market, and liquidity risks in securities transactions faced by market participants and U.S. investors. 'We were able to test that successfully.' The pilot was performed using State Street's Alpha platform with ties to its Charles River trading platform to the middle office and back office.

Summary:

U.S. Rep. Ritchie Torres, a New York Democrat who sits on the House Financial Services Committee, said New Yorkers should support the cryptocurrency market, CNBC reported Tuesday (May 17) ? though reports have him benefiting tremendously from crypto donors. In other crypto investing news, PYMNTS wrote that Coinshift, a crypto treasury management company, received \$15 million in a Series A round, with plans to roll out a new version of its platform. This all comes as crypto investors are seeing more political activity than before. ?Today, a new chapter of the Coinshift journey begins,? founder and CEO Tarun Gupta said. One of them, Protect Our Future ? which has endorsed Torres ? has raised \$14 million and could help tip the scales for elections in Ohio and Oregon. It?s a high-tech, high stakes waiting game.

Summary:

I wanted to plunk down my \$20, but OpenSea didn't accept credit cards. We hope you enjoy this issue, and that it reveals something new to you about the present that helps you better understand and prepare for the future. That is, it was a great gift until just over a week later, when the real Olive Garden's attorneys sent OpenSea a takedown notice, and all those non-fungible Olive Gardens vanished into the, uh, ether. But hey, my friend Katie was now the owner, kind of, of a JPEG of a photo of an Olive Garden in a mall in Louisville, Kentucky, on the Ethereum blockchain. I would need to buy some of the cryptocurrency Ether to complete the transaction. Ether in hand (or wallet, more precisely), I went back to OpenSea and tried to make a purchase.

metaverse: [ 133 ]

apple: [ 10 ]

Summary:

Vitalik Buterin certainly raised some eyebrows on Saturday, commenting on Twitter about how the Terra Luna disaster, which left many bankrupt and desperate, should be dealt with. Given that the vast majority of the currency was held by very large holders, thousands of small investors could be made whole entirely with this move, leaving the richest to bear the brunt of the collapse. While it may sound generous and caring, it is also remarkably controversial in the crypto space because it clearly invokes something that all crypto supporters hate: centralised regulation. Now, whether this could or should be enforced by external authorities on the entire industry, or just be devised as a part of each separate crypto project, is another question entirely. Are the ideals of what decentralised blockchain ? that nobody should have regulatory power over ? obsolete because of the volatility, risk and unpredictability of thousands of projects? It also shows that in extraordinary cases, the human mind ? even as devoutly engaged in crypto ? leans towards establishing protections for some of the participants in the name of greater good.

Summary:

The Vancouver-based company has also developed its own blockchain designed for NFTs, called Flow. Dapper Labs made its way onto the scene by way of its NBA Top Shot platform , which lets users trade and collect basketball highlights in the form of non-fungible tokens , or NFTs. They entered mainstream consciousness in a big way last year. "Unlike other blockchains, we designed Flow to be the cleanest and most energy efficient alternative, where minting an NFT on Flow emits less carbon than posting on a social network," Dapper Labs told CNBC.

For years, crypto critics have maligned the world's shift toward digital currency for "proof-of-work" mining, which requires sophisticated gear and a whole lot of electricity. It previously relied on Ethereum for platform sales, but shifted away from that network after its popular digital pet game CryptoKitties in 2017 led to slower transaction processing .

Summary:

Blockchain data and analysis platform Chainalysis has raised \$170 million in a Series F financing round. Previous investors Accel, Blackstone, Dragoneer and FundersClub increased their investment in the company, while the Bank of New York Mellon and Emergence Capital also participated.

Over the past year, the cryptocurrency industry crossed into the mainstream with financial institutions entering the space and new technologies like NFTs disrupting traditional markets, Gronager adds. The firm provides data, software, services and research to government agencies, exchanges, financial institutions, and insurance and cybersecurity companies to solve crypto crime and expand consumer access to cryptocurrency safely. Chainalysis will use the cash to invest in product development and scale its global operations to meet customer demand amid growing mainstream acceptance of cryptocurrency. In June last year, Chainalysis secured a \$100 million Series E financing round led by Coatue.

Summary:

The crypto trading and Web3 spaces are some of the game-changers of life that we know them to be. Rather cracking the game and establishing yourself as a honey influencer requires you to be quick on your feet and have hands-on experience from several attempts before. This is why, today we introduce Dannycrypt, whose real name is Daniel Ejike Muonuagha and is known as a frontrunner in this changing environment we see today, in his role as a Crypto and NFT trader and educator. In the future, Dannycrypt wants to keep on putting in all his hard work and time in his profession especially since he has proof of his talent in it. Unlike many professionals who are always trying to hold their area of occupation for their own benefit,

Dannycrypt has always been all about developing a sense of community in this ever-expanding place called the Crypto and NFT industries. I explored the NFT space and began trading NFTs too. Dannycrypt reviews that it is the complex and ever-changing nature of the Crypto and NFT industries in itself that first amused him and has still kept him hooked to it.

Summary:

?I think a lot of these tokens will fail,? Mr. Gensler told reporters after a House Appropriations Committee panel hearing Wednesday. The SEC said earlier this month that it plans to add 20 investigators and litigators to its unit dedicated to cryptocurrency and cybersecurity enforcement, nearly doubling the unit?s size. No major cryptocurrency issuer or trading platform has opted in to the commission?s oversight, however. Mr. Gensler said Wednesday that exposure to crypto in SEC-registered asset managers isn?t significant but that the agency has less visibility into private funds and particularly in family offices. TerraUSD, a token whose price was supposed to remain pegged to the dollar, suddenly dropped, along with the coin that was meant to back it, known as Luna. ?There is a path forward that we?re talking with these exchanges about to do both: to get the platforms registered and have a pathway for the tokens as well,? he said.

Summary:

The Australian Taxation Office (ATO) warned the country's cryptocurrency investors to appropriately report any capital gains or losses from digital assets ? including non-fungible tokens (NFTs) ? in an announcement on Sunday ahead of the upcoming tax season, starting July 1. The ATO will also be focusing on capital gains/losses from property and shares, rental property income and deductions, work-related expenses, and proper record keeping. The ATO said it expects more capital gains and losses to be reported in the 2022 tax season due to the popularity of cryptocurrency and NFTs as digital assets. As per ATO guidelines, recording a net capital loss allows a taxpayer to reduce a capital gain recorded later in the year, but cannot be offset against any other form of income.

Summary:

The Thai-based fintech Forward has received investment from the southeast Asian cryptocurrency platform Zipmex as part of a series of investments aimed at promoting and supporting blockchain projects and entrepreneurs. Zipmex has invested in Forward, a Thai-based decentralised finance platform situated on the EVM chain that offers a decentralised derivative exchange, lending and borrowing pools and NFT for trading through its services. Chanon Jaratsuttikul, CEO and co-founder of Forward Holdings, said: "Every day, the derivatives digital asset market is gaining momentum in driving the global economy. Thai VC companies Primestreet Capital and Ratanakorn Asset Co. Ltd., Thailand's largest real estate company, were also funders. "This investment reinforces our industry leadership. The investment was made by Zipmex Labs, which is the business unit of the wider Zipmex Group, and forms another piece of the puzzle in the platform's recent advocacy of blockchain-based projects and entrepreneurs, with Zipmex Labs having previously invested in projects like Tokenplace and Yieldly.

Summary:

NFT's are becoming more and more popular especially NFT art collections. The DNAverse team comprises a range of seasoned NFT specialists, scientists, designers and 3D animators at the vanguard of innovation in the biometaverse. Juan talks about his background, what DNAverse does, and their recent strategic partnership with Polygon Studios, to spearhead the development of the BIOmetaverse on the Polygon blockchain. This growing popularity has also inspired and increased innovation, and the latest company to get involved is DNAverse who have created the world's first art NFT collection customised with real DNA data. More about the DNAverse art NFT collection: Each NFT is one-to-one handcrafted and includes a genetic study and a fully personalised artistic interpretation of collectors' own DNA, presented as 'DNArts'. Ronan talks to Juan Castillo, Marketing Director of DNAverse.

crypto: [ 520 ]

metaverse: [ 41 ]

Summary:

Representations of cryptocurrencies Bitcoin, Ethereum, DogeCoin, Ripple, Litecoin are placed on PC motherboard in this illustration taken, June 29, 2021. Shortly before Russia sent tens of thousands of troops into Ukraine on Feb. 24, the finance ministry submitted legislative proposals that clashed with the central bank's demand for a blanket ban. However, Central Bank Governor Elvira Nabiullina has said the bank cannot welcome investments in cryptocurrencies, which account for about \$5 billion worth of transactions a year by Russians, and has proposed banning trading and mining them. Citing risks to financial stability from the rising number of crypto transactions, other central bank officials said last year they did not see room for cryptocurrency to be used on the Russian financial market. Russia has plans to issue its own digital rouble, but the government has only recently come round to supporting the use of private cryptocurrencies, having argued for years that they could be used in money laundering or to finance terrorism.

--Topic Scores--

general: [ 42 ]

stocks: [ 100 ]

crypto: [ 500 ]

metaverse: [ 120 ]

apple: [ 100 ]

Summary:

The new features were developed in partnership with NFT marketplace OpenSea. Today's announcement comes as Linktree raised a \$110 million all equity round in March. Last week, Instagram announced that it will start testing NFTs with select creators in the United States. NFTs that have been verified will be displayed in a hexagonal frame to make them stand out as profile images, which is the same approach that Twitter took with its NFT profile pictures. The company also notes that its platform is used by more than 24 million creators, artists and brands globally, including Selena Gomez, the Los Angeles Clippers, HBO and Shawn Mendes. The company's new ?NFT Gallery? link feature allows users to showcase their NFTs on their Linktree.
